

WHAT IS CLAIMED IS:

1. A camera comprising:  
an image data storing device that stores image data captured by an imaging device in a first storage medium;  
an audio data obtaining device that obtains audio data from one of the first storage medium and a second storage medium; and  
an audio data storing device that records in the first storage medium the audio data obtained by the audio data obtaining device when the image data storing device stores the image data in the first storage medium.
2. The camera as defined in claim 1, wherein the image data captured by the imaging device is moving image data.
3. The camera as defined in claim 1, further comprising two mounting parts to which the first storage medium and the second storage medium are attached.
4. The camera as defined in claim 1, wherein the second storage medium is built in the camera.
5. The camera as defined in claim 4, wherein the second storage medium is a rewritable storage medium.
6. The camera as defined in claim 1, further comprising an audio reproducing device that reproduces audio recorded in one of the first storage medium and the second storage medium.
7. A camera comprising:  
an image data storing device that stores image data captured by an imaging device in a first storage medium;  
an audio data obtaining device that obtains audio data from one of the first storage medium and a second storage medium; and

an audio data storing device that selectively records in the first storage medium one of the audio data obtained by the audio data obtaining device and audio data captured by a microphone when the image data storing device stores the image data in the first storage medium.

8. The camera as defined in claim 7, wherein the image data captured by the imaging device is moving image data.

9. The camera as defined in claim 7, further comprising two mounting parts to which the first storage medium and the second storage medium are attached.

10. The camera as defined in claim 7, wherein the second storage medium is built in the camera.

11. The camera as defined in claim 10, wherein the second storage medium is a rewritable storage medium.

12. The camera as defined in claim 7, further comprising an audio reproducing device that reproduces audio recorded in one of the first storage medium and the second storage medium.

13. A camera comprising:

an image data storing device that stores image data captured by an imaging device in a first storage medium;

an audio data obtaining device that obtains audio data from one of the first storage medium and a second storage medium; and

an audio data storing device that mixes the audio data obtained by the audio data obtaining device and audio data captured by a microphone when the image data storing device stores the image data in the first storage medium, and records the mixed audio data in the first storage medium.

14. The camera as defined in claim 13, wherein the image data captured by the imaging

device is moving image data.

15. The camera as defined in claim 13, further comprising two mounting parts to which the first storage medium and the second storage medium are attached.

16. The camera as defined in claim 13, wherein the second storage medium is built in the camera.

17. The camera as defined in claim 16, wherein the second storage medium is a rewritable storage medium.

18. The camera as defined in claim 13, further comprising an audio reproducing device that reproduces audio recorded in one of the first storage medium and the second storage medium.
